

5 things SMBBackup can do for your small business.

Most small business owners know the importance of data backup, however many still use solutions where restores aren't regularly tested, that are overly complex and that cost a fortune. We recommend SMBBackup because it's simple, reliable and affordable.

What can SMBBackup do for you?

1

Reliable scheduled backup of your physical and Hyper-V servers

Using the simple job creation wizard, we can quickly and easily protect your servers, important files and your individual applications with a fully automated backup schedule.

2

Easy restoration of files, Exchange mailbox data and SQL databases

When you need to, simply restore deleted or corrupted files with a few mouse clicks using SMBBackup's integrated restore console. Recover Exchange data fast, including messages, calendars and contacts or roll back your SQL database to a specific point in time.

3

Full recovery from disaster, hardware failure and theft

Major hardware failure is an all too common cause of lost revenue for businesses without an adequate backup plan in place. SMBBackup makes it simple to recover an entire system to bare-metal from either USB, HDD, RDX, local drive, network share or iSCSI target.

4

An off-site copy of your data for 'belt and braces' protection

Add an extra layer of protection with a bandwidth efficient off-site backup of your files and folders to either a cloud storage provider, remote NAS or Windows server.

5

All while keeping your budget intact

SMBBackup consists of a low cost core product licence and add-ons that depend on the functionality you require, so you only pay for what you need.
