

Technology Built for SME

Cloud Technology built for SMEs

Designed specifically for the SME market, Proofpoint Essentials employs the latest in cloud technology to deliver a purpose built, true cloud email security solution, inclusive of email filtering, antivirus, email archiving and email continuity.

Why do SMEs love Proofpoint Essentials Technology?

Proofpoint Essentials enables SMEs access to the core security and threat detection capabilities used by some of the world's largest and most security conscious enterprises. Through the Proofpoint Essentials platform, the Proofpoint patented MLX technology previously only available to the larger enterprise is now accessible to SMEs. In addition to this high level technology, Proofpoint Essentials effortlessly offers partners multi-level channel management options and easy provisioning of modern SaaS architecture for the smaller enterprises.

Purpose-built, Cloud based technology

By filtering mail at the Internet level before it reaches the network, Proofpoint Essentials can save organisations considerable amounts on administrative tasks, bandwidth, end-user filtering, and even disk space on servers.

Proofpoint Essentials has developed a purpose-built solution, specifically targeted at the SME market that really works. There's no fuss, quick setup and easy management. We know in the SME space time is of the essence, so Proofpoint Essentials offers market leading technology without the management and deployment headaches. Be up and running in minutes and with a simple, easy to navigate interface, with multi-level logon options to make managing users a breeze. As a 100% cloud-based, there's no hardware or software to install or worry about. Administrators simply login to the online console and manage all users and account settings from one single secure platform.

Main Features

- Access to enterprise level security focused for the needs of the SME.
- Proofpoint Patented MLX technology
- Fully cloud based infrastructure.
- Machine Learning Technology for more accurate content analysis and reducing false positives.
