## Cloud Email Archive

There are many reasons why archiving your email to the cloud makes sense. From managing and securing your data to achieving regulatory compliance, removing storage limitations and reducing storage or management costs.

The benefits and flexibility available through implementing a cloud email security solution are huge and not to be ignored. Proofpoint Essential's 10year cloud archive ensures SMEs stay protected and compliant.

### How does Proofpoint Essentials archive your email?

At Proofpoint Essentials, we store each customer's email separately in the cloud, using unique encryption. We use the exchange journaling function to extract email from your exchange server. This removes a carbon copy of your email (inbound, outbound and internal) from the server without the need to install client site software. This process, finely tuned by Proofpoint Essentials, is a highly supported method of archiving from the early stages of exchange due to its accuracy and reliability.

### Why should you archive your email with Proofpoint Essentials?

- Automatically preserve all emails and attachments for compliance protection.
- Ability to manage, monitor and review all email content.
- Protect vital data and store it securely.
- Eliminate data storage constraints and meet legal and regulatory obligation.
- Provides tamper-proof email capture.
- Customers' email is stored separately from other users in a uniquely encrypted format.
- Quick data export to meet regulatory obligations
- Verified end-users can easily access archived data if and when required, from any web browser and without any technical know-how.
- Fully indexed, rapid search and e-discovery features as standard
- Because backing up is simply no longer good enough.

### What functionality is available with archived emails?

Emails can be retrieved 'as a copy' from the archive and redelivered to the original recipient or sender, and/or forwarded to another 'approved' email address such as that of the administrators or a company solicitor. As well as the emails being searchable (even from metadata contained within the email's attachments), additional functionality available to approved archive administrators includes the ability for copies of the email to be downloaded to .eml files, .pst folders or if there are multiple messages these can be downloaded into compressed (zip) folders by request.

## Key Features

- Real-time envelope journaling for Exchange.
- Supporting Microsoft SBS, Exchange 2003,2007,2010, Hosted Exchange\*
- Unlimited Storage.
- Up to 10 Years storage options.
- Territory-based Archiving.
- Instant retrieval of email messages up to 10 Years.
- Legal hold and third party access when needed.
- Configurable retention policies.
- Detailed Email Archive logs.
- Segregated and secure archive per customer
- Tamper Proof and off-site

## Search and eDiscovery

- Rapidly search and retrieve email messages and hundreds of types of attachments.
- World-class search & legal discovery.
- Complete traceability.
- Easy to use Search Archive Audit log.
- Configurable retention policies.
